Technical Skills

Languages: Java 8/17/21, Python Scripting, SQL

Frameworks: RESTful APIs, SpringBoot, Spring Data JPA, Hibernate, Spring Cloud, Microservices, OpenAPI

Database/Cache: MySQL, SQL Server, Oracle SQL Developer, Hazelcast Cache

Testing: JUnit, Mockito, WireMock, REST Assured, JaCoCo, Karate (Integration Testing), PITest (Mutation Testing)

GCP Cloud: Cloud Function, Cloud Storage, Cloud SQL, Cloud Scheduler, Compute Engine, Cloud Pub/Sub, Container Registry, GKE (Google Kubernetes Engine)

CI/CD Tools: Jenkins, Ansible, SonarQube

Containers Tools: Docker, Kubernetes

Others: Maven, JFrog Artifactory, HTTP Client, IntelliJ, JIRA, Linux

Professional Experience 5 years 4 months

Senior Software Engineer, EPAM Systems – Pune, MH

Mar 2025 – Present

Client: Mastercard

- Contributing as java full-stack backend engineer towards platform modernization for payment instrument in financial services domain.
- Developed a core payments module that securely enrolls customer cards, implementing advanced encryption techniques to protect sensitive data.
- Managed the development of an orphan scheduler to safely and permanently purge millions of orphaned cards whose retention timestamp has surpassed the specified time and ensuring strict compliance with data retention policies for India on-soil cards.
- Leveraged modern testing frameworks to build a comprehensive suite of automated integration tests using the Karate framework, achieving end-to-end API coverage. Validated data integrity by performing direct database assertions, ensuring system reliability and adherence to business logic.
- Accelerated development workflows by leveraging AI-powered coding assistants and modern IDE features.

Senior Software Engineer, LTIMindtree – Pune, MH

Nov 2021 – Mar 2025

Client: Nordea Bank Abp

- Fund Distribution Platform [FDP] is a robust Wealth & Asset Management platform supporting high-volume, low-latency trading across multiple asset classes, including stocks, bonds, currencies, and commodities, with key components like Trade Order Management, Market Data Feed, and Risk Management.
- Experienced on event driven architecture and microservices pattern like Strangler, Service Registry and Discovery, Circuit Breaker, SAGA, CQRS.
- Designed and implemented high-performance RESTful APIs using Spring Boot and OpenAPI specifications, reducing development time and improving startup time, enhancing overall system efficiency.
- Migrated a legacy monolith to modern microservices (Java 21/Spring Boot 3.3) using the Strangler Fig Pattern.
- Optimized core backend microservices and enhanced system observability with structured logging in Spring Boot, improving throughput, adding diagnostics, and reducing downtime by 30% through proactive bug resolution.
- Built a Caching Service to boost system efficiency by 25%, improving client satisfaction by 15
- Improved code quality and reduced vulnerabilities by implementing SonarQube for continuous code analysis.
- Executed PoC/analysis and developments over complex solutions for the business.
- Integrated Distributed Request Tracing in microservices using Spring Boot 3, Micrometer Tracing and Splunk which enabled seamless monitoring, debugging, and enhanced the effectiveness of inter-service communication.
- Maintained comprehensive Unit Testing with Junit, Mockito, WireMock and Integration Tests with REST-Assured, achieving 95% code coverage and a 40% reduction in post-release defects.
- Streamlined CI/CD processes by implementing a Jenkins pipeline, simplifying build and deployment workflows for high-throughput and low-latency applications.

- Developments and L3 Support for an Investment Banking product.
- Received recognition twice from the Engineering Manager for consistent contribution and improvements delivered for FDP application.

Software Developer, IKS Health – Mumbai, MH

Mar 2021 – Nov 2021

- Contributed to developing Optimix, a Revenue Cycle Management (RCM) platform that automates Accounts Receivable, Billing, Patient Payments, and Pre-authorization tasks and enhancing operational efficiency.
- Implemented secure Authentication and Authorization using Spring Security in API Gateway.
- Integrated GCP Cloud Functions triggered by Cloud Storage events to store document in non-editable and encrypted format.
- Created Cloud Function to transfer data from BigQuery to Cloud SQL for MySQL
- Developed a Python script for bulk data validation on customer CSV files, guaranteeing data accuracy prior to insertion into the database.
- Diagnosed and resolved production issues to maintain system stability and reliability.

Analyst, Shree Krishna Engineers – Vadodara, GJ

Aug 2018 – Aug 2019

- Ticket Master is a monolith workflow management solution application to streamline maintenance operations for manufacturing machines, centralizing processes and automating communication with production managers.
- Defined use cases, requirements to enhance design and implement RESTful APIs using Java 8, Spring Boot and Unit Tests with JUnit.

Projects

Project Management System

- Architected PMS, a secure web application for project, tasks and session management.
- Implemented user authentication and authorization using Spring Security and JWT for secure access.
- Integrated Swagger for API interaction and documentation, enhancing development transparency and usability.
- Tracked the entire project life cycle and held accountable for work being accomplished by each team.
- **Tools Used:** Java 8, Spring Boot, JPA, JUnit, MySQL
- **GitHub Link:** github.com/Devendra274/Project-Management-System

PDF to Image Converter

- Protected sensitive file information through the implementation of the AES-256 encryption algorithm.
- Stored encrypted files in Google Cloud Storage, triggering Cloud Functions to convert PDFs into individual images in another bucket.
- **Tools Used:** Python, GCP Cloud Function, GCP Cloud Storage
- **GitHub Link:** github.com/Devendra274/PDF-To-Image-Converter

Document Parser

- Developed a File Parser to extract key-value entities from scanned patient forms with over 75% accuracy, saving them as JSON, validating the data, and generating reports.
- **Tools Used:** Python, Google Cloud Platform, Document AI

Education

CDAC ACTS, PG Diploma in Advance Computing (PG-DAC), Pune, MH

Jan 2020 – Jan 2021

- Grade: A

Babaria Institute of Technology (GTU), Bachelor of Engineering, Vadodara, GJ

Jun 2012 – Jun 2016

- CGPA: 7.72
